Meeting Net Zero in Clinical Trials

A BIP UK Life Sciences Solution

Clinical Trials are time consuming and resource intensive, often with limited demographic reach and a huge environmental impact in terms of emissions and waste. Building a sustainable Clinical Trials value chain is important for pharma companies to achieve their Net Zero ambitions, accurate disease demographics, and healthier patient outcomes.

Did You Know?

Healthcare accounts for **5%** of global greenhouse gas emissions

If healthcare were a country, it would be the **5th** largest emitter after China, U.S, India, and Russia

In 2021, **350K** trials were registered which gave an estimated **27.5 million tonnes** of CO₂ - around half the national emissions of Denmark

Direct impacts on patients and healthcare from environmental changes are estimated to cost **\$4 billion** per year by 2030

Top Contributors to Clinical Trial Environmental Footprint

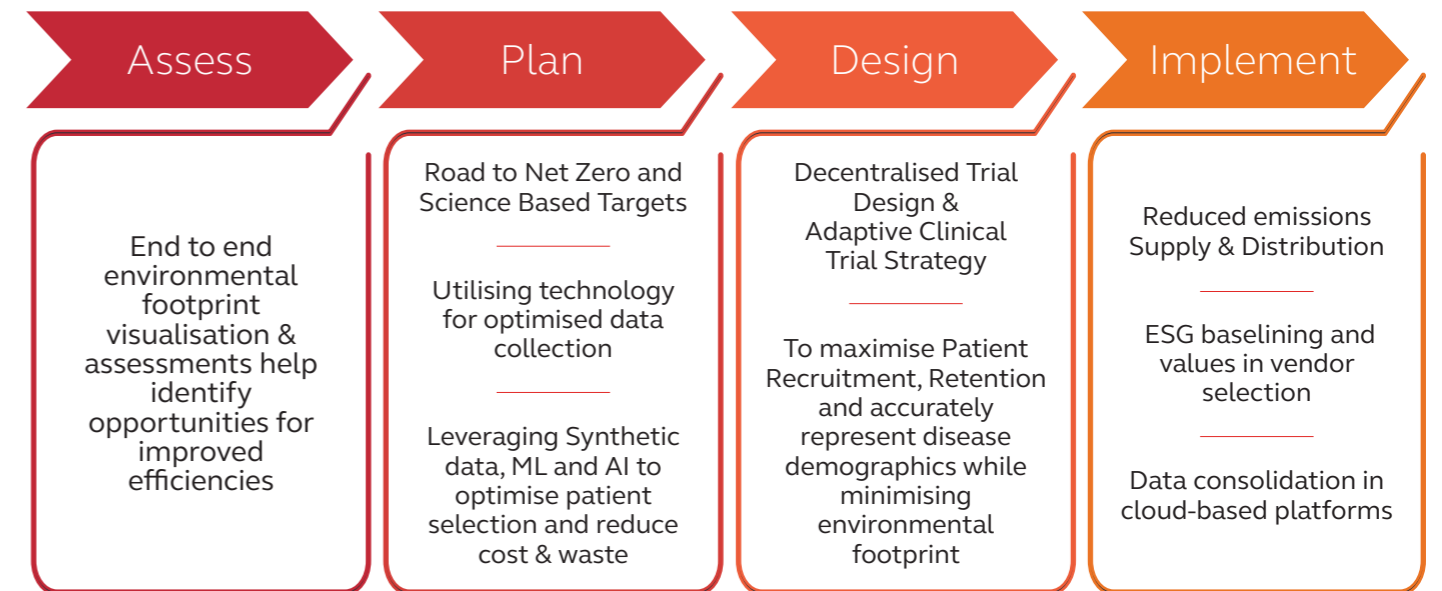

Building a greener future is a journey that begins by embedding sustainable measures throughout the Clinical Trials value chain

Why Does This Matter?

BIP Expertise Can Help

We are your strategic partner, wherever you are on your journey. We work with you to deliver your sustainability vision using our four step process.
